REQUIREMENTS FOR THE PROJECT

SYSTEM DEVELOPMENT LIFE CYCLE

The project is done on **STUDENT RECORD SYSTEM**.

The student record system is a program where we can add the details of the students and store in a file. This makes managing the student records in an organising way which will be simple and easy to understand. This program can be used by the administration department. This program has a password which enables security so only certain people are allowed to access.

STRENGTH: The program has various options to add new record, to modify record, to delete record, to display all records, to search records. This system has an extra feature which displays the marksheets of the students.

WEAKNESS: The program does not have an option to update or change password so the can be easily hacked. This can be a threat to the program.

This program is referred from https://code-projects.org/.
